AICIS evaluation statement

Subject of the evaluation

Chemicals not considered for in depth evaluation—not commercially active in Australia

Chemicals in this evaluation

See **Supporting Information Section** (below) for the list of chemicals included in this evaluation.

Reason for the evaluation

An evaluation is needed to provide information on human health and environmental risks.

Parameters of evaluation

These chemicals are listed on the Australian Inventory of Industrial Chemicals (the Inventory). This evaluation provides information on chemicals identified during the Evaluation Selection Analysis (ESA) process as not having, or unlikely to have, industrial use in Australia.

The Inventory is based on compilation work which finished in 1990. Changes in chemical use are expected to have occurred since its compilation. Recent activities by overseas jurisdictions have identified that significant numbers of chemicals listed on their respective chemical inventories are no longer in active use. Many chemicals listed on the Inventory are similarly expected to no longer be in use. Additionally, there are chemicals listed on the Inventory that have existing regulatory controls that preclude the industrial use of these chemicals in Australia, as currently defined under the *Industrial Chemicals (IC) Act 2019*. AICIS proposes to not prioritise these chemicals for an in depth evaluation as this will increase efficiency and make sure our resource effort for evaluations is risk proportionate. However, should new information become available about a chemical, or chemicals below, a further evaluation may be initiated by the Executive Director under *Part 4 of the IC Act 2019*.

The chemicals have been identified based on available information from legislative sources including the *Poisons Standard—the Standard for the Uniform Scheduling of Medicines and Poisons* (SUSMP; TGA 2021), general information searches and from overseas jurisdictions, such as:

- Registration status of the chemical under the European Union's Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH) regulation (EU 2006).
- Designation of the chemical under the *United States Environmental Protection Agency Toxic Substances Control Act (TSCA)* Inventory Notification (Active-Inactive) rule (U.S. Government 2016).
- Commercial status of the chemical in Canada as determined through Inventory updates conducted by Government of Canada's Chemical Management Plan (Government of Canada).

The chemicals have undergone a validation process, satisfying criteria that they are considered to be commercially inactive as industrial use chemicals in Australia. This evaluation process takes into consideration the applicability of the regulatory scope of international schemes regulating industrial chemicals overseas [noting that, for example, cosmetic uses are not regulated under REACH (EU 2006) and the level of certainty of the chemical identity].

The risk conclusions in this evaluation are based solely on the unlikelihood of public, worker and environmental exposure to the chemicals. An evaluation of the hazards of the chemicals has not been undertaken.

Summary of Evaluation

Summary of introduction, use and end use

The available information suggests that the chemicals subject to this evaluation are not likely to be introduced for industrial use in Australia.

Human health

Summary of health risk

Public

Based on the available information that the chemicals subject to this evaluation are not likely to be introduced for industrial use in Australia, there are no identified risks to the public that require further regulation to manage the risk to health.

Workers

Based on the available information that the chemicals subject to this evaluation are not likely to be introduced for industrial use in Australia, there are no identified risks to workers that require further regulation to manage the risk to health.

Environment

Summary of environmental risk

Based on the available information that the chemicals subject to this evaluation are not likely to be introduced for industrial use in Australia, there are no identified risks that require further regulation to manage the risk to the environment.

Conclusions

The Executive Director is satisfied that, based on the available information, the chemicals subject to this evaluation are not likely to be introduced for industrial use in Australia and; therefore, do not require further evaluation or regulation to manage any potential risks associated with industrial use of the chemicals.

Although the chemicals are unlikely to be in use in Australia, the 'inactive' determination does not impact their Inventory status as 'listed' chemicals.

If you become aware of information relating to the use and volume of use for any of these chemicals listed in this statement then you should [advise the Office of Chemical Safety \(OCS\), Department of Health.](#)

Should additional information relating to the use and volume of use for any of these chemicals become available to the OCS (including information which may be provided by industry), we will determine if further evaluation of the chemical(s) is necessary.
